

# New Soundfield in a Box from Connevens...

Imagine a classroom of 30 pupils, where teachers do not have to raise their voices to be heard by everyone. Where the sound is spread so evenly around the room that all the students can hear the spoken word equally well, no matter where they are seated or which direction the teacher is facing.

A Soundfield System cuts through the background noise from inside and outside the classroom, amplifying the teacher's voice evenly, right to the back of the classroom.

The sound level is discreet so that the children are not distracted by the system itself. In fact, the level of noise inside the classroom usually falls!

Improved speech clarity and verbal recognition for all class members will have a positive effect on class discipline, attentiveness and academic performance.

Teachers will also benefit from greatly reduced vocal fatigue and a less stressful teaching day!

The new Soundfield Systems developed by Connevens offer constant, enhanced clarity, multi-channel options, unique diversity reception for superb sound quality and built in security.....all in a box!
