

## Non hearing aid users

The **InfraLight** and **RadioLight** systems both offer a steto headset model.

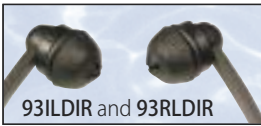

Stereo steto headset or headphones/ earphones are ideal for hard of hearing people who need to increase the TV volume and do not have a hearing aid. In many cases, although they may be able to hear the television, the volume is often too loud for others in the room. All these systems offer excellent stereo sound quality.

Non-hearing aid users can also use the **HA/neckloop** version with any pair of 3.5mm headphones. *Max volume 120 dBA.*

InfraLight DIR with steto headset 93ILDIR

RadioLight DIR with steto headset 93RLDIR

93ILDIR and 93RLDIR

**DIR – round earpads** The fitted ear-pieces of the under-the-chin receiver are made from soft silicone material and fit the shape of the auditory canal.

Wireless listening devices <i>All systems supplied with rechargeable battery, microphone, SCART adaptor and audio lead.</i>	For non-hearing aid users		For hearing aid & non-hearing aid users
